

The new TRICAD MS Release 2020.0 is now available for maintenance customers in the download section.

Important information:

To install TRICAD MS it is very important that you always perform a complete installation. To do this, you need the following three files, which must be installed exactly in this order and within the same folder:

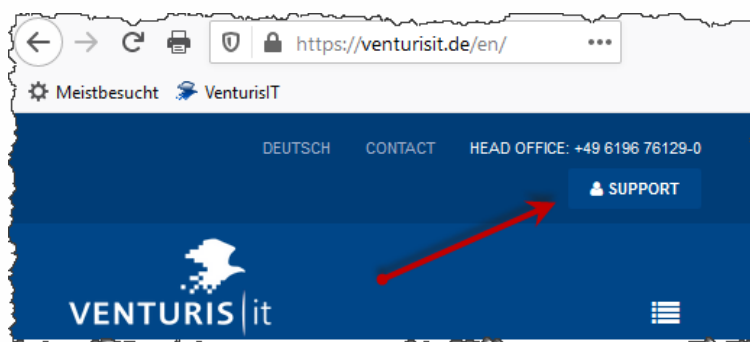

1. TRICAD MS Release 2020.0.zip
2. TRICAD MS Helps 2020.0.zip

For this release version you **need** a new licence file.

You find more information and further details in the release notes and the installation guide.

The download area is available 24/7 to service customers via the usual login details.

If you want to update to the current TRICAD MS release and don't have a current maintenance contract, please get in contact with us and request an individual update offer.

Further information about the contents and new functions can be found in the release notes, which are available in the download section.
